Education

University of Alberta

Expected June 2027

Bachelor of Science in Computer Science - AI option | GPA: 3.3/4.0

Edmonton, AB

- **Relevant Coursework:** Database Management, Data Science, Applied Statistics, Artificial Intelligence, Machine Learning, Reinforcement Learning, Management Information Systems, Software Engineering, Algorithms, Data Structures

Technical Skills

Languages: Python, SQL, R, Java, JavaScript, HTML/CSS

Databases: PostgreSQL, SQLite, MongoDB, Firebase

Tools & Frameworks: Pandas, NumPy, Seaborn, Scikit-Learn, Matplotlib, Git, GitHub, MATLAB, Google Colab, VS Code, Linux, Figma, ChromaDB, MS Office Suite

Data & Analytics: ETL pipelines, Data Modeling, Feature Engineering, Database Design, Query Optimization, Data Visualization (Tableau, Power BI, MS Excel)

Practices: REST APIs, Agile, SDLC, Testing, CI/CD

Projects

NoteSense AI | Python, ChromaDB, Ollama

- Developed a retrieval-augmented generation **RAG** system to process PDFs, generate embedding, and enable context-aware Q&A using a local LLM.
- Built an AI pipeline for document ingestion, vector search, and response generation to streamline analysis of unstructured data.

CrimeScope | Python, Pandas, Folium

- Developed an end-to-end **ETL** and **geospatial data analysis pipeline** processing **80,000+** records to identify spatial crime patterns and trends.
- Applied **data analysis** and **feature engineering techniques** to generate insights and support data-driven decision-making.

FlightPulse | Python, SQLite

- Built a **data pipeline** to collect, clean, and structure flight pricing data, enabling consistent data storage and analysis workflows.
- Performed **time-series analysis** and **trend modeling** to identify pricing patterns and support data-driven insights.

SystemAudit | MS Excel, PivotTable

- Designed and analyzed a **company-wide IT systems audit dataset (630+ records, 23 systems)** by cleaning, restructuring, and consolidating survey data to support **data quality analysis** and **reporting**.
- Built **Excel dashboards** and **PivotTable-based reports** to identify system inefficiencies, recurring issues, and training gaps, supporting stakeholder decision-making.

CourseHub | Python, SQL, SQLite, Git

- Designed a **relational database system** using SQL to support multi-role workflows, including enrollment and data management.
- Built a Python CLI application with **data validation** and **efficient querying**, enabling structured data workflows.

Leadership

St. Joseph's College, University of Alberta

Sept 2024 – present

Mentor

Edmonton, AB

- Led orientation and mentorship for **50+** first-year students, fostering peer engagement and guiding them through academic systems and resources while demonstrating strong **leadership** and **communication** skills.

Certifications

IBM: Data Analyst Professional Certificate

2025

Tableau: BI Analyst Professional Certificate

2025
